Congratulations on your choice of ***ElevIQ Technologies*** Sales Force Automation(Back Office Application) for your organization. This package is a part of ***ElevIQ Technologies*** from Eastern Software Systems. It is a powerful and flexible Application,designed to take care of the operations of the sales department.

How To Use This Manual?

This manual is designed to help you quickly learn to use ***ElevIQ Technologies*** Sales Force Automation. Use this manual as a reference guide to acquaint yourself with the features of ***ElevIQ Technologies*** Sale Order. In case you need any assistance while working with any option, look up for the particular topic in the table of contents and refer to the specified page number in the manual. The manual explains each option in detail and also gives notes on each option.

Sales Force Automation (SFA)

Step 1 :- First we create a company, so we give a one form where we register the company and admin user for login the app and this form will open with a unique code so when we provide the valid code then form will open and then enter the company key details and one admin user register so that we can login with that email id/username password and in this company master add no_of_user and licence column so what happen like if company 01 have 5 no of user then only 5 user can register not more than if they inactive any user then they can create and after create they want to active those inactive user then show that u cant bcz no of user have 5 only and licence is like app licence to use the app so if we have not given licence and verify then in app they cant do anything so like lincene expire pls contact with provider something like that so on same company register page we'll generate the licence for month based or year so for now if choose 6month then licence will work 6month only or instead of licence u can do valid from – valid to date so in between they can do anything anfter that date they cant do anything.

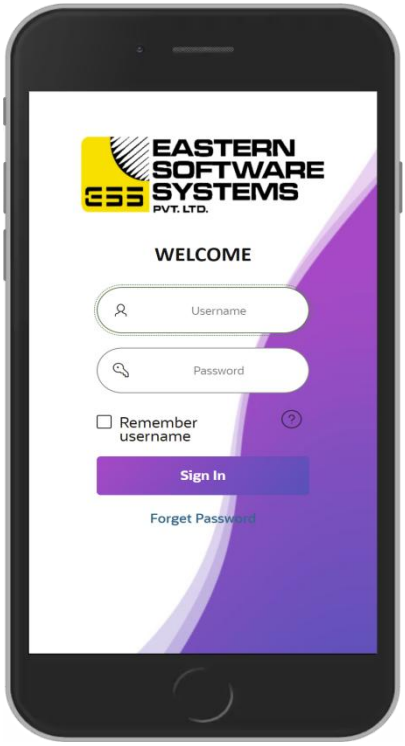

Note :- for company register company code will also generate like 01,02 something like that so then next time user will login then company will come like sometime what happened owner is 1 but they have multi branch so in that case if they want to manage then we need to use code also so when we

creating a user then will allocate the company that this user is for this company and this user is for this company.

Now we'll start from admin module after register the company and one user for that company

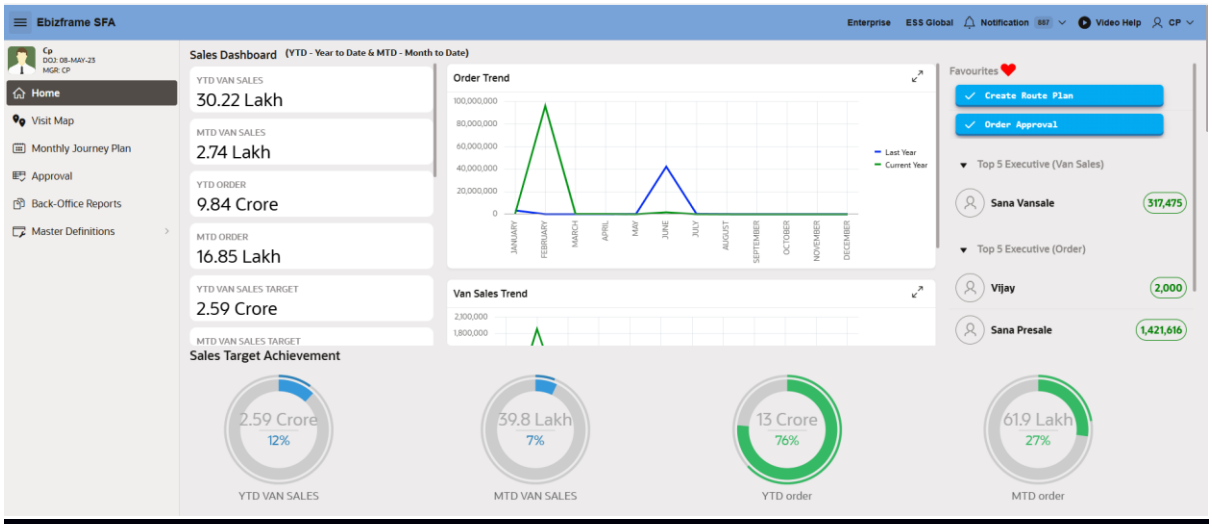

LOGIN

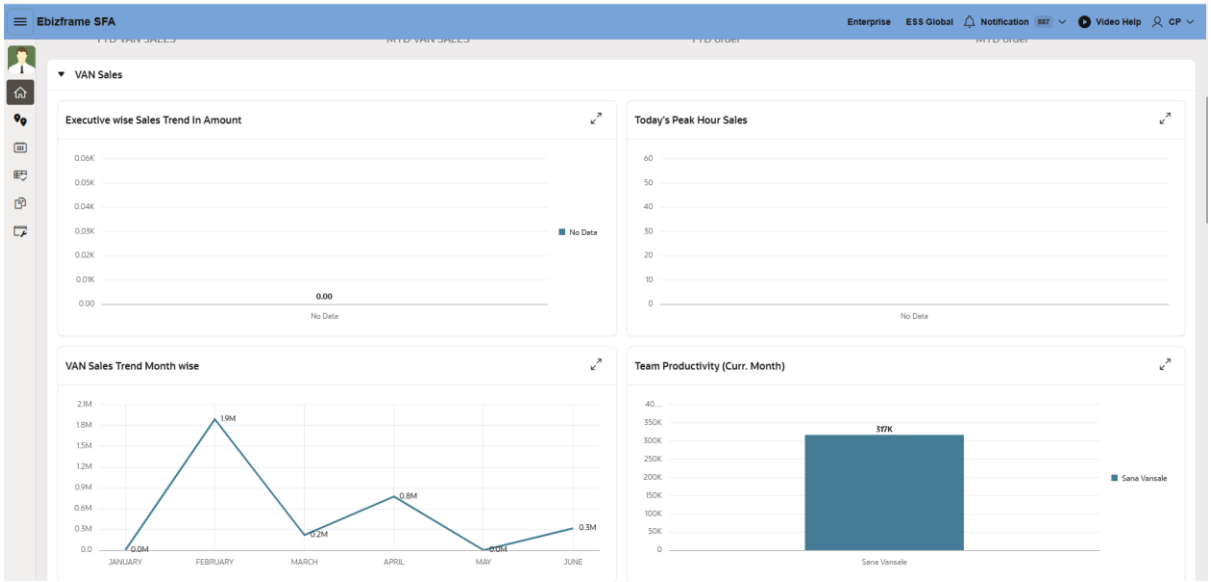

For signing in to the ElevIQ Technologies SFA Application , you need to enter the user id and password of the admin user and click on **Sign in** button.

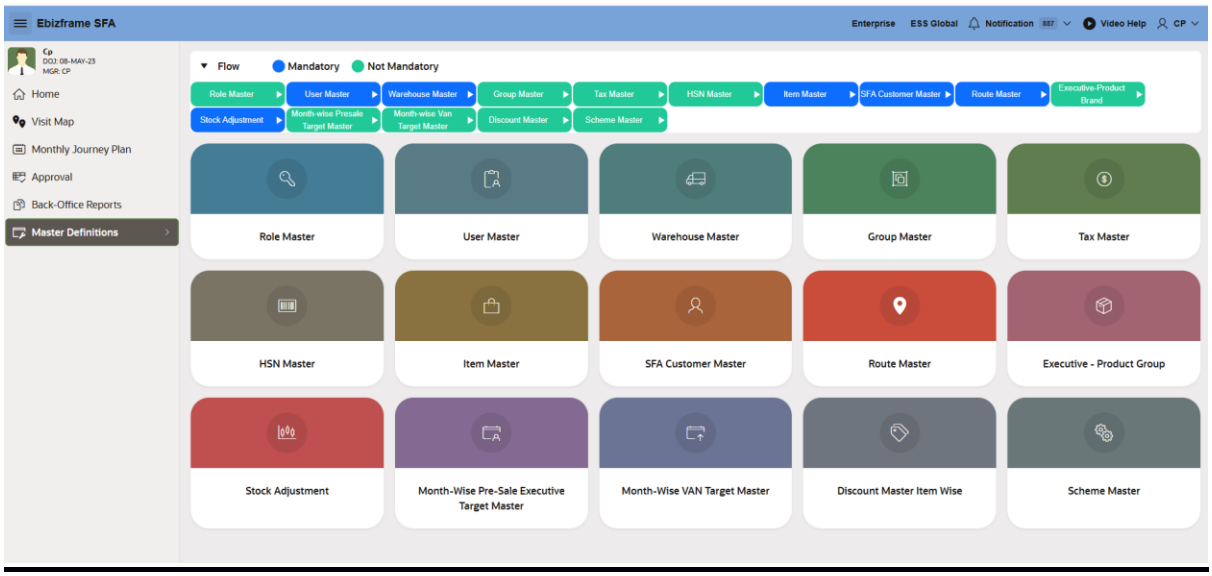

After signing in , It will open a dashboard page which will look like this :

1. Getting Started(Dashboard): This dashboard helps User to see all activities like tour visits, today's sales, order Value, total day invoices ,total day expense,pending documents for approval approved documents and attendance history.

2.Master Definitions :

1.Role Creation

With the help of this Role master , we can create a role for the user and assign them the menu according to their job role. For creating the role , you need to click on the Create button .Now, write the role name on the form and click on **Add Row** and add the menu according to their job role .

Basically there are two type of roles are created for this application :

1. Mobile user : Mobile user can only access to the mobile applications menu.

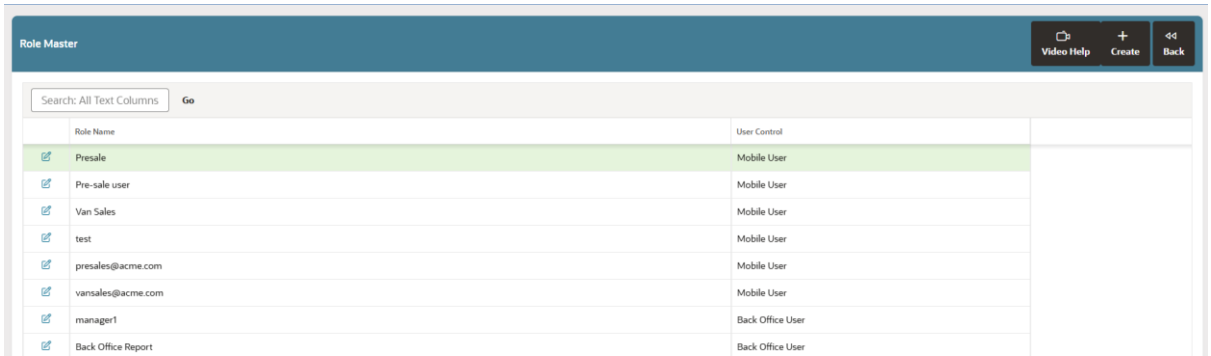

2. Back office user : Back office user can only access the back office applications menu.

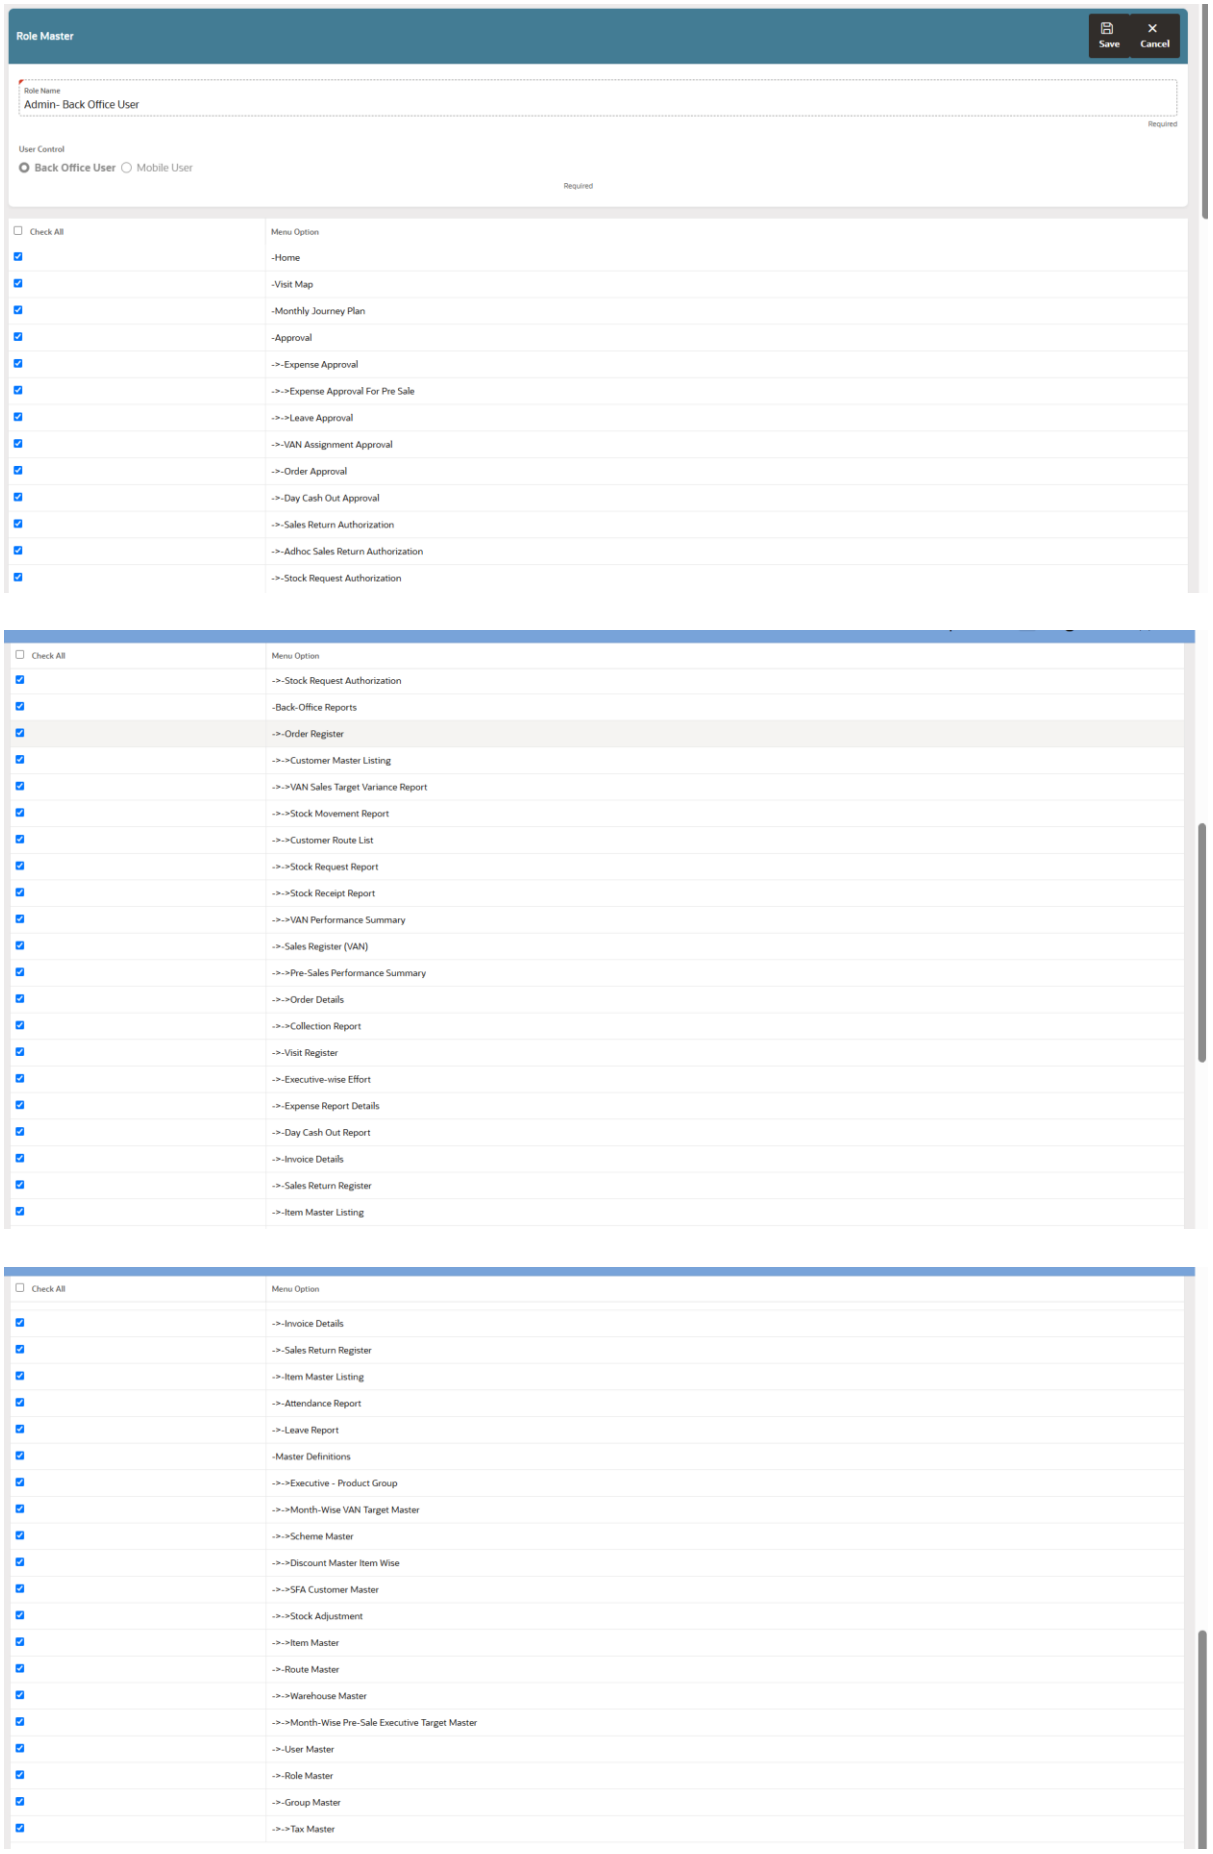

1.Mobile User : In mobile we have two types of menu --

Presale :- Pre sale user can only access the pre sales menu.

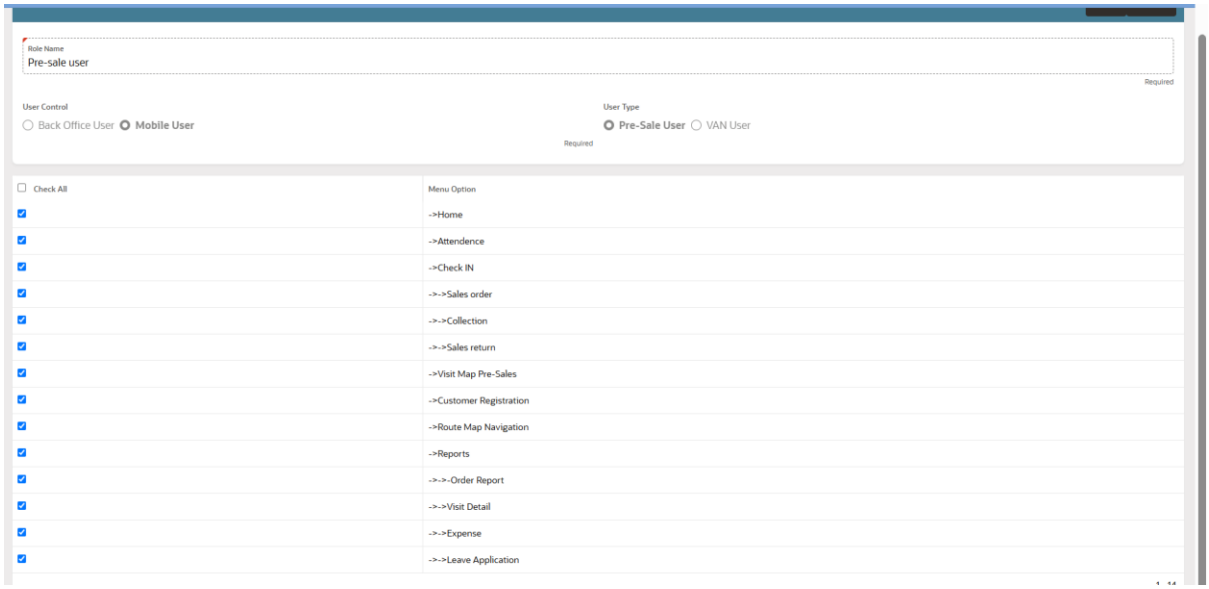

Vansale :- van sale user can only access the van sales menu.

Click on Save button for saving the details . For Editing , we need to click on edit button (pencil button) and edit the details and save the changes.
